DETAILED ACTION

*Response to Amendment*

1. In response to the Amendment received on August 2, 2007, the examiner has carefully considered the amendments.

*Response to Arguments*

2. Applicant's arguments, see Remarks/Amendment, filed August 2, 2007, with respect to claims 23-35 have been fully considered and are persuasive. The provisional rejection of claims 23-35 under nonstatutory obviousness-type double patenting over 10/883,453 has been withdrawn. The rejection of claims 23-35 under nonstatutory obviousness-type double patenting over 7,118,840 has been withdrawn. The rejection of claims 23-35 under nonstatutory obviousness-type double patenting over 6,214,508 has been withdrawn. The rejection of claims 23-26 and 28-35 under 35 USC 102(b) has been withdrawn.

While there are no claim rejections left, the examiner has noticed that the definitions for Y in claim 23 is not adequately defined in such a way that there is adequate guidance for a skilled artisan to obtain/make/use the charge transport composition comprising the molecule having the formula found in the instant claims. Per conversation with representative Paul Savererlde, the examiner suggested adding the limitations of claims 27 and 30, which define Y, into independent claim 23 and 30, as well as, doing this (addition of the dependent claims defining Y into each independent claim).

*Claim Rejections - 35 USC § 112*

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claims 23-35 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Art Unit: 1796

In claims 23 and 30, it is unclear what types/kinds of linking groups Y is intended to define. Does Y include carbonate, lactone,  $-(CH_2)_k-$  where k is an integer of greater than 30, ether groups, acetylene groups, or the like? Clarification is requested.
